**Importance:** High

---

Based on our analyses (by Andy Waite) ...

If our mission parameters of public water system selection for field assessments do NOT expand and we are not tasked to work Alpha or Charlie Branches, our worst case estimate is finishing ALL assessments no later than this Thursday (Sept 14) and would be ready to stand down our Water Infrastructure Group.

This is based solely on the available number of PWS remaining in Bravo Branch which currently excludes ALL Transient Non-Community Systems.

Demob would then be Friday at the latest.

We are no longer in need of replacements

We are working on estimates for wastewater systems

Thanks,

**Mark McCasland**  
**Water Infrastructure Supervisor**
